

# FEATHER DRIVE

## DESCRIPTION

Thankyou for purchasing the Feather Drive and welcome to our little world. The Feather Drive was the flagship for Selah Effects. Late 2012 we released a limited run of 15 swirl painted feather drives, these sold out really quickly and created a tonne of hype!

It is intended to sound like an authentic cranked tube amplifier, and it does this brilliantly. The pedal can range from a clean boost right through to complete tube saturation with a twist of a knob. Unlike some pedals, the Feather Drive is not frequency biased, it does not have a midrange hump, nor will the highs make your ears bleed. It's a beautiful balance designed to maintain and enhance your guitar signal.

We use some of the best components available, such as carbon comp resistors, AVX & Nichicon capacitors, gold connectors on the IC chip and Neutrik jacks, all enclosed in a Hammond enclosure. We have also fine tuned its EQ response to give a more open sound, but still cut through.

## SPECS

- 9V DC Center Negative power only
- 111 x 60 x 27mm
- True Bypass
- Hand Wired

## DIRECTIONS

A three way clipping switch is also included. In the right position you get a marshall plexi type sound, great for rock and rhythm. The middle position is an ultra smooth overdrive, great for running into an already cranked tube amplifier. Lastly, the left position runs a symmetrical clipping, giving that classic tube screamer sound.

## CONTROLS
